ABSTRACT

What is the incidence of planets around intermediate mass stars? What are their astrophysical properties? How do they survive the post-main sequence evolution?

We aim to address these key questions with highly sensitive JWST/NIRCam observations requiring only a modest amount of telescope time. Our sample consists of seven white dwarfs in the nearby Hyades open cluster. These white dwarfs had intermediate mass main-sequence progenitors with masses between 2.8 and 3.6 solar masses. The white dwarfs make ideal targets as i) planetary orbits did widen adiabatically during the stellar AGB phase by a factor of 4 to 5 (e.g. from 5 to 25 au), and ii) the small size and resulting low luminosity of the white dwarfs greatly alleviates the contrast requirements for a direct planet detection. New detections will add to the growing number of known exoplanets in the Hyades. At effective temperatures of 200K, any "white dwarf planet" will also provide an essential link between the considerably warmer (Teff>700K) giant planets imaged thus far around nearby young stars, and the cooler (Teff = 90 to 100 K) giant planets in the solar system. This combined with the well known ages and metallicity of the Hyades will provide new benchmarks for atmospheric and evolutionary planet models, and place comparative planetology on a much more solid footing. The program will establish new constraints on the formation and evolution of planetary systems around intermediate mass stars.

OBSERVING DESCRIPTION

We propose NIRCam imaging observations in F210M and F460M of seven Hyades white dwarfs.

The observations do NOT employ the coronagraphics masks as i) the white dwarfs are relatively faint in the infrared (mAB_F460M typically ~ 17 mag), and ii) the contrast requirements are relatively modest (delta mag in F460M < 10 mag for angular separations > 500mas). All observations will be carried out in full frame mode with the science target in the center of the field of view of NIRCam B3. The standard sub-pixel dither pattern is used with 2 dither positions. To facilitate angular differential imaging, each target will be oberved at two roll angles, resulting in a time requirement of about 1.8 hr of telescope time per target.

The observations will be sensitive to detect giant planets at angular separations larger than 0.5 arcsec (corresponding to typical semimajor axis of 20 to 25 au) in orbit around these WDs. The observations in F460M will be sensitive to reach sub-Jupiter masses, while the observations in F210M will provide color (and hence temperature) information for planets more massive than 2 Jupiter masses, and provide effective means to distinguish between planet candidates and background sources like field stars or galaxies. A modest saturation of the center of the point spread function of the brighter white dwarfs in F210M will not impact the data analysis.

Proposal 7824 - Targets - Search for giant planets around white dwarfs with intermediate-mass progenitors in the nearby Hyades cluster

Diagnostics

(Visit 13:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.

(Visit 13:1) Informational (Form): Visit schedulable, but most scheduling windows are when JWST is pointed in direction of greatest micrometeoroid impact risk. This is likely due to scheduling special requirements.

Fixed Targets

#	Name	Target Coordinates	Targ. Coord. Corrections	Miscellaneous
(7)	WD0438+108	RA: 04 41 1.7398 (70.2572492d)	Proper Motion RA: 91.375 mas/yr	
		Dec: +10 59 40.00 (10.99444d)	Proper Motion Dec: -10.777999932543025 mas/yr	
		Equinox: J2000	Epoch of Position: 2000	

Comments: This object was generated by the targetselector and retrieved from the SIMBAD database.
Category=Star
Description=[White dwarfs]

Template

Module	Subarray	Target Placement
ALL	FULL	Module Gap

Dithers

#	Primary Dither Type	Primary Dithers	Subpixel Dither Type	Dither Size	Subpixel Positions
1	NONE		STANDARD		2

Spectral Elements

#	Short Filter	Long Filter	Readout Pattern	Groups/Int	Integrations/Exp	Total Integrations	Total Dithers	Total Exposure Time	Optional ETC ID
1	F210M	F460M	BRIGHT2	10	2	4	2	880.415	141747

Special Requirements

Offset 55.0 arcsec, 35.0 arcsec

Aperture PA Offset 13 from 14 by 6 to 14 Degrees (Same offsets in V3)

Observation

Proposal 7824, Observation 14: WD0438_roll2

Wed Aug 27 17:00:15 GMT 2025

Diagnostic Status: Warning

Observing Template: NIRCam Imaging
