

## 6005 - Imaging Young Sub-Jupiter Planets down to Solar-System Scales

Cycle: 3, Proposal Category: SURVEY

### INVESTIGATORS

| <i>Name</i>                                 | <i>Institution</i>                                      |
|---------------------------------------------|---------------------------------------------------------|
| <b>Dr. Beth Biller (PI) (ESA Member)</b>    | <b>University of Edinburgh, Institute for Astronomy</b> |
| Dr. Aarynn L Carter (CoI) (US Admin CoI)    | Space Telescope Science Institute                       |
| Dr. Adam L. Kraus (CoI)                     | University of Texas at Austin                           |
| Dr. Andreas Quirrenbach (CoI) (ESA Member)  | Landessternwarte Heidelberg                             |
| Andrew David James (CoI) (ESA Member)       | University of Exeter                                    |
| Dr. Ben Sutcliffe (CoI) (ESA Member)        | University of Edinburgh, Institute for Astronomy        |
| Dr. Brendan Bowler (CoI)                    | University of California - Santa Barbara                |
| Brittany E Miles (CoI)                      | University of Arizona                                   |
| Dr. Christian Marois (CoI) (CSA Member)     | Dominion Astrophysical Observatory                      |
| Dr. Elisabeth C Matthews (CoI) (ESA Member) | Max Planck Institute for Astronomy                      |
| Dr. Genaro Suarez (CoI)                     | American Museum of Natural History                      |
| Isabel Rebolledo (CoI) (ESA Member)         | ESA, European Space Astronomy Centre                    |
| Dr. Johanna Vos (CoI) (ESA Member)          | Trinity College Dublin                                  |
| Dr. Jarron Leisenring (CoI)                 | University of Arizona                                   |
| Jens Kammerer (CoI) (ESA Member)            | European Southern Observatory - Germany                 |
| Dr. Jordan Michael Stone (CoI)              | Naval Research Laboratory                               |
| Julien Girard (CoI)                         | Space Telescope Science Institute                       |
| Dr. Kevin Wagner (CoI)                      | University of Arizona                                   |
| Kyle Franson (CoI)                          | University of California - Santa Cruz                   |
| Dr. Mark Booth (CoI) (ESA Member)           | UK Astronomy Technology Centre                          |
| Dr. Matthew Kenworthy (CoI) (ESA Member)    | Universiteit Leiden                                     |
| Dr. Matthias Samland (CoI) (ESA Member)     | Max Planck Institute for Astronomy                      |
| Prof. Michael R. Meyer (CoI)                | University of Michigan                                  |

JWST Proposal 6005 (Created: Monday, May 19, 2025, 8:02:23AM Eastern Standard Time) - Overview

| <b>Name</b>                                 | <b>Institution</b>                               |
|---------------------------------------------|--------------------------------------------------|
| Ms. Pengyu Liu (CoI) (ESA Member)           | University of Edinburgh, Institute for Astronomy |
| Dr. Rachel Bowens-Rubin (CoI)               | Eureka Scientific Inc.                           |
| Raquel Martinez (CoI)                       | University of San Diego                          |
| Dr. Robert J De Rosa (CoI) (ESA Member)     | European Southern Observatory - Chile            |
| Dr. Samuel M. Factor (CoI)                  | University of Texas at Austin                    |
| Dr. Sasha Hinkley (CoI) (ESA Member)        | University of Exeter                             |
| Sebastian Marino (CoI) (ESA Member)         | University of Exeter                             |
| Dr. Simon Petrus (CoI)                      | Universidad de Valparaíso                        |
| Dr. Thayne M. Currie (CoI)                  | University of Texas at San Antonio               |
| Dr. Trent J. Dupuy (CoI) (ESA Member)       | University of Edinburgh, Institute for Astronomy |
| Dr. Valentin Christiaens (CoI) (ESA Member) | Katholieke Universiteit Leuven                   |
| William Balmer (CoI)                        | Space Telescope Science Institute                |
| Dr. Yifan Zhou (CoI)                        | The University of Virginia                       |
| Dr. Yiting Li (CoI)                         | University of Michigan                           |
| Dr. Zhoujian Zhang (CoI)                    | University of Rochester                          |
| Dr. Cecilia Lazzoni (CoI) (ESA Member)      | University of Exeter                             |

## ABSTRACT

The extreme IR sensitivity of JWST enables imaging of sub-Jupiter exoplanets for the first time, yielding sensitivity even to young analogues of Saturn. JWST survey mode observations are an excellent way to survey nearby young stars for highly scientifically valuable sub-Jupiter exoplanets, in a manner that minimizes risk. We propose here for survey mode observations of a carefully selected sample of 114 young FGK stars (all <500 Myr, but predominantly <150 Myr) within 50 pc -- the first survey to systematically search for wide sub-Jupiter exoplanets around solar analogues. Our survey targets are drawn from nearby young moving groups (MG) with well-established ages, specifically the Beta Pic, Columba, Tuc-Hor, AB Dor, Carina-Near and Ursa Majoris associations. All of our survey targets reach sensitivities sufficient to image sub-Jupiter exoplanets, with more than half of our sample reach sensitivity sufficient to image to 0.5 MJup planets and 1/3 of our sample will yield sensitivity down to young Saturn analogues, thus this survey has the potential to discover the coldest and lowest mass exoplanet directly imaged to date. Our survey targets are also uniformly distributed on the sky, allowing for robust scheduling opportunities. Fulton et al. 2021 find an enhanced frequency of radial velocity sub-Jupiters relative to higher mass planets, suggesting the presence of an enhanced population of wide sub-Jupiters at semi-major axes beyond 10 AU. Observations of even a small subset of our survey stars will yield a useful statistical result and confirm or refute the existence of an enhanced sub-Jupiter population, whether or not a new exoplanet is detected.

## OBSERVING DESCRIPTION

We follow the established strategy of GO 4050 and obtain 30 minutes of NIRCam dual-band coronagraphy per target, in F200W+F444W with the circular 335R mask, which yields sensitivity to sub-Jupiter exoplanets for all survey targets. For each star in APT, the readout pattern, the number of groups, and the number of integrations for each science exposure were adopted from the optimal parameters reported by PanCAKE for that star. PanCAKE maximizes the achieved signal-to-noise whilst mitigating the effects of cosmic rays, and ensures that enough groups and integrations are available for ramp fitting and the correction of temporal detector effects. Readout pattern and number of groups for each target acquisition were set

## JWST Proposal 6005 (Created: Monday, May 19, 2025, 8:02:23AM Eastern Standard Time) - Overview

using the STScI JWST ETC to ensure  $S/N > 100$  on the target star, while avoiding saturation. We will also obtain astrometric confirmation images for each of our targets to verify that they are correctly centered behind the coronagraphic mask. Exact settings for readout, number of groups, and number of integrations vary between survey stars, but all observations will limit on-target integration time to 30 minutes. We have divided the sample according to K band magnitude, with the following choices for acquisition and science observation parameters as a function of K band magnitude:

Faint target acquisition: (readout mode, ngroups, nints)

$K > 7$       acq: RAPID, 17    sci: DEEP8, 18, 5

$7 > K > 5.6$     acq: RAPID, 3, sci: DEEP8, 18, 5

$5.6 > K > 5$  acq: RAPID, 3    sci: DEEP8, 10, 9

Bright target acquisition (with ND square): (readout mode, ngroups, nints)

$5.0 > K > 4.8$     acq: BRIGHT2, 65    sci: DEEP8, 10, 9

$4.8 > K > 4.49$     acq: BRIGHT2, 65    sci: DEEP8, 8, 11

$4.49 > K > 4.3$     acq: BRIGHT2, 65    sci: DEEP8, 7, 13

$4.3 > K > 4.0$     acq: BRIGHT2, 65    sci: DEEP8, 6, 16

$K < 4.0$       acq: BRIGHT2, 65    sci: DEEP8, 4, 25

To obtain optimal contrast performance, we will perform PSF subtraction through RDI using a self-referencing strategy, constructing the optimal subtraction PSF for a given observation from the other observations within our sample, as well as archival reference PSFs from other programs. We request a total of 114 survey targets. As APT requires every coronagraphic observation to specify at least one linked reference, unfortunately this

means that all observations do show errors (according to APT) at the time of submission.

30 July 2024: offset SR to place target at recommended offsets of (-0.006, -0.012) added for all targets; acquisition exposure times adjusted to produce acquisition sequences  $> 10$  s in length, when possible.

|                                                  | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                       |                                                                                     |                   |                                         |                                                                                                                                   |                  |                          |                     |                              |                     |

| SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                                                                                                                                                                                    |                       |                                                                                                   |                    |                                               |                  |                          |                    |                           |                              |

|               | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                       |                                                                                     |                    |                                         |                                                                                                                        |                  |                          |                     |                              |                     |

| SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM |                                                                                                                                                                                    |                       |                                 |                    |                                         |                                              |                  |                          |                     |                              |  |                     |  |                    |  |                     |  |                  |  |

|                                                  | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                       |                                                                                     |                    |                                         |                                                                                                                                               |                          |                    |                           |                              |

|                   | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                       |                                                                                    |                    |                                         |                                                                                                                                      |                          |                           |                     |                              |
