ABSTRACT

The discovery of kilonovae alongside gamma-ray bursts (GRBs) lasting tens of seconds or more has sparked a paradigm shift in our understanding of the diversity of jets launched by merging neutron stars. The prototypes of this new class are two of the brightest GRBs ever detected, strongly suggesting a hidden population that are systematically misclassified as collapsing massive stars - the canonical model for GRBs that last for more than two seconds. Long-lived mergers have palpable implications for binary neutron star merger rates, heavy element nucleosynthesis, the physics of relativistic jet launch, and multi-messenger follow-up strategies to gravitational wave events. We propose NIRSpec observations over the next three JWST cycles to systematically target and classify 21 emergent GRBs at $z < 1$ as either mergers or collapsars based on spectroscopic identification or exclusion of supernovae. We will build the first 'clean' observational samples of collapsars and mergers to investigate their respective rates and observable properties. For mergers up to $z < 0.5$, we expect to make spectral detections of kilonovae, potentially resulting in the largest spectroscopic sample of this rare class of transient to date. We will also extend the redshift range of detected type Ic broad-lined supernovae, which accompany long GRBs, out to $z = 1$. This will allow us to uniquely probe their evolution at redshift $0.5 < z < 1$ for the first time, providing insights into how the composition of massive stars and their host galaxies change in this cosmic epoch.

OBSERVING DESCRIPTION

We request NIRSpec observations of 21 well-localised GRBs with confirmed redshifts of up to $z \sim 1$. These are targets of opportunity, and so are not known in advance. Observations will take place over a 3-year period to build unbiased, systematic samples of GRBs from stellar collapse and from long-lived mergers. We aim to spectroscopically detect or rule out supernovae, and detect kilonovae where sufficiently nearby ($z \sim 0.5$ or less). We will use the Prism/CLEAR grating/filter pair and the S400A1 slit (0.4" x 3.8"). The detector setup utilises the full subarray and the NRSIRS2RAPID readout pattern.

Acquisition will be done with WATA using an offset star, but this cannot be planned until the observations are known.

Proposal 11348 - Targets - Identifying the progenitors of an unbiased sample of long gamma-ray bursts

Proposal 11348 - Observation 12 - Identifying the progenitors of an unbiased sample of long gamma-ray bursts

Special Requirements	Target Of Opportunity Response Time <None specified> to 14 Days
----------------------	---

Proposal 11348 - Observation 13 - Identifying the progenitors of an unbiased sample of long gamma-ray bursts

Observation	Proposal 11348, Observation 13											Fri Jun 12 16:00:21 GMT 2026
	Diagnostic Status: Error											
Diagnostics	Observing Template: NIRSpec Fixed Slit Spectroscopy											
	(Observation 13) Error (Form): Minimum Response time is a required field.											
Generic Targets	(Visit 13:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.											
	#	Name	Criteria									
Acquisition	(13)	GRB13	GRB at z <~ 1									
	#	Target	TA Method	Subarray	Filter	Readout Pattern	Groups/Int	Integrations/Exp	Total Integrations	Total Exposure Time	Optional ETC ID	
Template	1	SAME	WATA	SUB2048	F110W	NRSRAPID	3	1	1	3.628	270660

Proposal 11348 - Observation 13 - Identifying the progenitors of an unbiased sample of long gamma-ray bursts

Special Requirements	Target Of Opportunity Response Time <None specified> to 14 Days
----------------------	---

Proposal 11348 - Observation 14 - Identifying the progenitors of an unbiased sample of long gamma-ray bursts

Observation	Proposal 11348, Observation 14											Fri Jun 12 16:00:21 GMT 2026
	Diagnostic Status: Error											
	Observing Template: NIRSpec Fixed Slit Spectroscopy											
Diagnostics	(Observation 14) Error (Form): Minimum Response time is a required field.											
	(Visit 14:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.											
Generic Targets	#	Name	Criteria		Description							
	(14)	GRB14	GRB at z <~ 1									
Acquisition	#	Target	TA Method	Subarray	Filter	Readout Pattern	Groups/Int	Integrations/Exp	Total Integrations	Total Exposure Time	Optional ETC ID	
	1	SAME	WATA	SUB2048	F110W	NRSRAPID	3	1	1	3.628	270660
