ABSTRACT

Limited fidelity in stellar models poses a bottleneck in multiple fields of astrophysics, including correcting exoplanet transmission spectra for host star heterogeneity (“stellar contamination”). Accurate corrections for magnetically active stellar surface regions require either refined model precision or empirical solutions. We propose establishing a JWST Spectral Library for Cool Stars, providing high-precision, flux-calibrated spectra critical for validating and refining current stellar model atmospheres. This library will benchmark next-generation models and offer empirical spectra for accurate transmission spectrum corrections. Featuring high-resolution NIRSpec spectra of 43 carefully selected magnetically quiescent stars (3200 K–5000 K) across a broad metallicity range, it will encompass ~90% of known transiting exoplanet hosts amenable to JWST transmission spectroscopy. The project will enhance atmospheric characterizations of rocky planets and provide an immediate, valuable community resource for modeling cool stellar atmospheres, thus supporting JWST’s mission and serving as a legacy asset.

OBSERVING DESCRIPTION

We use NIRSpec Fixed Slit Spectroscopy to observe 40 inactive M and K dwarfs (~3200 K to 5000 K) and one G-dwarf flux standard (P330E). We observe each target with three grating/filter configurations: G140H/F100LP, G235H/F170LP, and G395H/290LP, yielding complete wavelength coverage from 0.97-5.27 μm . For each grating, we obtain three exposures in the S200A1 aperture and three exposures in the S200A2 aperture for a total of six exposures. We use a three-point spatial dither pattern in each aperture. For spectroscopic exposures, we use the ALLSLITS subarray, which covers the detector region illuminated by both apertures. We tune exposure parameters to yield S/N ~ 300 at 1.6, 2.4, and 4.4 μm . All targets are faint enough to acquire directly with NIRSpec Wide Aperture Target Acquisition (WATA).

Proposal 11441 - Observation 121 - The JWST Spectral Library for Cool Stars

Observation	Proposal 11441, Observation 121: TIC422329269										Wed Jun 17 00:00:17 GMT 2026	
	Diagnostic Status: Warning											
	Observing Template: NIRSpec Fixed Slit Spectroscopy											
Diagnostics	(Visit 121:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.
