ABSTRACT

We propose to obtain multi-color NIRCам and MIRI image of a massive star forming region to highlight the stars, dust, and gas to reveal its physical conditions in a nearby galaxy.

OBSERVING DESCRIPTION

This proposal will use NIRCам and MIRI imaging to obtain broad and narrow-band imaging of a star forming region to be released in 2024. The images must be sufficiently deep to allow for the creation of low-noise color-composite images. The dither patterns are optimized for uniform depth,

efficient removal of cosmic rays and other artifacts. These criteria will also produce very high-quality, science-ready data products for use by the community. This proposal does not include spectroscopic observations.

Proposal 6555 - Targets - Star-formation in a nearby galaxy

Fixed Targets	#	Name	Target Coordinates	Targ. Coord. Corrections	Miscellaneous
	(1)	Star_formation_region_A	RA: 01 34 32.7230 (23.6363458d) Dec: +30 46 54.58 (30.78183d) Equinox: J2000	Epoch of Position: 2000	
	Comments: This object was generated by the targetselector and retrieved from the SIMBAD database. Category=ISM Description=[H II regions] Extended=YES				

Proposal 6555 - Observation 1 - Star-formation in a nearby galaxy

Observation	Proposal 6555, Observation 1: Star_formation_region_A NIRCam										Fri Dec 22 23:00:25 GMT 2023
	Diagnostic Status: Warning										
	Observing Template: NIRCam Imaging										
Diagnostics	(Visit 1:1) Warning (Form): Data Excess over lower threshold										
	(Visit 1:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.										
Fixed Targets	#	Name	Target Coordinates			Targ. Coord. Corrections			Miscellaneous
