ABSTRACT

We propose deep spatially- and spectrally-resolved NIRSpec 1.7 - 5.1 μm ($R \sim 2700$) MSA spectroscopy of 275 galaxies spanning $1 < z < 10$ in the CEERS NIRCам imaging footprint of the Extended Groth Strip. This program is designed around two primary science goals: (1) revealing the spatially-resolved kinematics of galaxies in the early universe ($3.5 < z < 7$) in large numbers ($N \sim 100$) for the first time, and (2) detecting and characterizing the physical and chemical conditions of their outflowing gas. The targeted sample spans a wide range in stellar mass ($8 < M^*/M_{\text{sun}} < 10$) and cosmic time (~ 8 Gyr), and will enable a uniform demographic study of the kinematics and outflows of galaxy populations over mass and redshift.

We incorporate a unique prioritization scheme to maximize the number of galaxies that are aligned (for spatially-resolved kinematics) or perpendicular (for spatially-resolved winds) with the NIRSpec mask—increasing the scientific efficiency of this program by a factor of two. To facilitate immediate value of this program for the community, we waive the proprietary period and commit to release the high-level 1D- and 2D-spectra within 6 months of the execution of the observations.

OBSERVING DESCRIPTION

We target six pointings with the NIRSpec multi-shutter assembly (MSA) in the Extended Growth Strip (EGS) to obtain deep spatially-resolved spectroscopy of 275 galaxies spanning a redshift range $1 < z < 10$. The galaxy targets are selected from NIRCам imaging in EGS taken as a part of the CEERS Early Release Science Program. We employ the NIRSpec/G235H and G395H high-resolution gratings ($R \sim 2700$) to study the kinematic and wind properties of this galaxy sample. We request ~ 4 hour exposure times per grating per pointing to reach the emission line depths needed to carry out the science goals. The background is estimated using a master background constructed from a number of dedicated background shutters that are positioned throughout the the field-of-view of the MSA. A single 5-shutter dither is included to mitigate detector artifacts. We request

JWST Proposal 8410 (Created: Tuesday, January 20, 2026, 1:04:53PM Eastern Standard Time) - Overview

coordinated NIRCam parallels that flank the existing WFC3 + NIRCam footprint of EGS. The NIRCam imaging will use the same set of filters as the CEERS survey (F115W, F150W, F200W, F277W, F356W, F410W, F444W) to provide uniform NIRCam coverage in and around the EGS field. The new NIRCam imaging from this program will be 1.5 - 2 times deeper than that from CEERS and will expand the area of EGS with NIRCam imaging by ~40%.

Proposal 8410 - Targets - A Census of Galaxy Kinematics and Outflows to $z \sim 7$

Proposal 8410 - Observation 5 - A Census of Galaxy Kinematics and Outflows to $z \sim 7$

Observation	Proposal 8410, Observation 5: OCEANS_obs-5_v6											Tue Jan 20 18:04:53 GMT 2026
	Diagnostic Status: Warning											
	Observing Template: NIRSpec MultiObject Spectroscopy											
	Coordinated Parallel Template(s): NIRCam Imaging											
Diagnostics	(Visit 5:1) Warning (Form): Data Excess over lower threshold											
	(Visit 5:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.											
Fixed Targets	#	Name	Target Coordinates				Targ. Coord. Corrections			Miscellaneous		
	(5)	APT_CAT_obs-5	RA: 14 19 44.8401 (214.9368337d) Dec: +52 53 15.18 (52.88755d) Equinox: J2000									
	Comments: Description=[]											
Acquisition	NIRSpec MultiObject Spectroscopy	Reference Star Bin	Target	Filter	MSA Configuration	Readout Pattern	Groups/Int	Integrations/Exp	Total Integrations	Total Exposure Time	Optional ETC ID	
	1	Filter: F140X; Readout: NRSRAPIDD6; 8 sources in 4 quads; [Optimal TA Accuracy]	SAME	F140X	Auto Acq MSA Config	NRSRAPIDD6	3	1	4	687.153		
Template	NIRSpec MultiObject Spectroscopy					NIRCam Imaging						
	TA Method: MSATA					Module: ALL						
	HFF Readout Mode: false					Subarray: FULL						
	Obtain Confirmation Images: No											
	Science Aperture: MSA Center											
	Primary Candidate List: PRIMARY (2034 sources)											
	Filler Candidate List: FILLER (167694 sources)
