

# 10764 - Once More, With Feeling: Establishing a Robust Sample of JWST Exoplanet Discoveries

Cycle: 5, Proposal Category: GO

## INVESTIGATORS

| <i>Name</i>                                         | <i>Institution</i>                                      |
|-----------------------------------------------------|---------------------------------------------------------|
| <b>Dr. Aarynn L Carter (PI)</b>                     | <b>Space Telescope Science Institute</b>                |
| Dr. Beth Biller (CoI) (ESA Member) (CoPI) (Contact) | University of Edinburgh, Institute for Astronomy        |
| Andrew David James (CoI) (ESA Member)               | University of Exeter                                    |
| Dr. Andrew Skemer (CoI)                             | University of California - Santa Cruz                   |
| Mr. Aniket Sanghi (CoI)                             | California Institute of Technology                      |
| Ash Messier (CoI)                                   | The Johns Hopkins University                            |
| Dr. Ben Sutcliffe (CoI) (ESA Member)                | University of Edinburgh, Institute for Astronomy        |
| Dr. Brendan Bowler (CoI)                            | University of California - Santa Barbara                |
| Dr. Bruce A. Macintosh (CoI)                        | University of California - Santa Cruz                   |
| Dr. Caroline Morley (CoI)                           | University of Texas at Austin                           |
| Dr. Christine Chen (CoI)                            | The Johns Hopkins University                            |
| Dr. Clemence Fontanive (CoI) (ESA Member)           | University of Edinburgh, Institute for Astronomy        |
| Dr. Elisabeth C Matthews (CoI) (ESA Member)         | Max Planck Institute for Astronomy                      |
| Dr. Ellis Bogat (CoI)                               | University of Maryland - CRESSTII / NASA Goddard        |
| Dr. Emily Rickman (CoI) (ESA Member)                | Space Telescope Science Institute - ESA - JWST          |
| Evelyn Bruinsma (CoI)                               | Space Telescope Science Institute                       |
| Dr. Gael Chauvin (CoI) (ESA Member)                 | Institut de Planetologie et d'Astrophysique de Grenoble |
| Dr. Giovanni Maria Strampelli (CoI) (ESA Member)    | University of Edinburgh, Institute for Astronomy        |
| Dr. Grant Kennedy (CoI) (ESA Member)                | University of Warwick                                   |
| Isabel Rebollido (CoI) (ESA Member)                 | Centro de Astrobiologia (CAB), CSIC/INTA, Spain         |
| Isabel Kain (CoI)                                   | University of California - Santa Cruz                   |

JWST Proposal 10764 (Created: Wednesday, June 24, 2026, 1:01:17PM Eastern Standard Time) - Overview

| <b>Name</b>                                     | <b>Institution</b>                               |
|-------------------------------------------------|--------------------------------------------------|
| James Mang (CoI)                                | University of Texas at Austin                    |
| Dr. Jarron Leisenring (CoI)                     | University of Arizona                            |
| Dr. Jason J. Wang (CoI)                         | Northwestern University                          |
| Jens Kammerer (CoI) (ESA Member)                | European Southern Observatory - Germany          |
| Jingwen Zhang (CoI)                             | University of California - Santa Barbara         |
| Dr. Jonathan Gagne (CoI) (CSA Member)           | Planetarium Rio Tinto Alcan                      |

## ABSTRACT

We propose NIRCam coronagraphic follow-up observations of 35 promising exoplanet candidates identified from publicly available JWST imaging of 170 nearby young stars, obtained through three of the largest exoplanet surveys to date. These surveys achieved unprecedented sensitivity to sub-

Jupiter mass (0.1-1 MJup) companions at wide separations ( $>10$  au), revealing a sample of sources with colors and morphologies consistent with cool ( $\sim 300$ -500 K) exoplanets. However, to distinguish true planets from background stars and galaxies, a second epoch of imaging is required to test for common proper motion. Our proposed observations will verify the planetary natures of these sources, and yield the first definitive measurement of sub-Jupiter exoplanet occurrence beyond 10 au, directly addressing whether the enhanced population of sub-Jupiters seen by radial velocity studies extends to wider separations. In the event that all of our candidates are disproven, these observations will still establish robust constraints on the frequency of wide separation sub-Jupiters, and advance our understanding of the formation and evolution of planetary systems. Confirmed discoveries will include record setting low mass, temperate exoplanets and will act as new benchmarks for planetary atmospheres across a broad range of temperatures and surface gravities. Giant planets play a significant role in the formation and evolution of planetary systems as a whole, and our constraints will also provide context to the formation of other planetary classes, such as exo-Earths, a key focus for the upcoming Habitable Worlds Observatory.

## **OBSERVING DESCRIPTION**

We will conduct repeat NIRCам dual-band coronagraphic imaging observations of a sub-sample of 36 targets from the existing JWST programs GO4050, GO5835, and SURVEY6005 to verify the presence of candidate exoplanet companions. We adopt the same observational and exposure setup up as the original observations, which corresponds to: MASK335R coronagraph in combination with the F200W+F444W filters, each exposure set to approximately 30 minutes, and specific readout parameters defined by the existing programs. Target acquisition exposures are also set to match the original observations.

PSF subtraction will be conducted through reference difference imaging under a self-referencing strategy. This strategy was successful when applied to the publicly available survey data, and due to the large number of targets will be equivalent if not superior in performance to a dedicated reference star strategy due to the increased PSF diversity. To facilitate this strategy, observations have been split into 4 independent sequences according to their spectral type and/or schedulability throughout the year. This reduces the required time by reducing the size of observatory slews.

One observation is an exception to the above, and is a NIRCам non-coronagraphic imaging observation, but still mimics the original observation for this target in GO5835. In this case, PSFs can be readily obtained from other imaging observations and the predicted companion is distant enough from the stellar PSF core that a high quality of subtraction will not be necessary, and a dedicated reference PSF will not be needed.

## Proposal 10764 - Targets - Once More, With Feeling: Establishing a Robust Sample of JWST Exoplanet Discoveries

Comments: This object was generated by the targetselector and retrieved from the SIMBAD database.

SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM.

| SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                                                                                                                                                                                                                                                             |                  |                                                                                     |                    |                                         |                                                                                                                                                |                  |                    |                     |                 |                              |

When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |  |  |  |  |  |  |  |  |  | Category=Star<br>Description=[F stars] |  |  |  |  |  |  |  |  |  |

|                                        | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                  |                                                                                     |                                                                                                                                    |                                         |                  |                  |                    |                     |                              |   |      |                    |                          |  |  |               |  |  |  |      |                  |                                                                                     |                                                                                                                                    |  |  |  |  |  |  |                                                                                                   |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |                                        |  |  |  |  |  |  |  |  |  |

|                                                  | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                  |                                                                                  |                    |                                         |                                                                                                                                     |                  |                    |                     |                 |                              |

| SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                    |                                                                                                                                  |                          |                                         |                  |                  |                    |                     |                 |                              |   |      |                    |                          |               |     |                         |                                                                                    |                                                                                                                                  |  |

|                   | Comments: This object was generated by the targetselector and retrieved from the SIMBAD database.<br><br>SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM.<br>Category=Star<br>Description=[M stars] |                 |                                                                                     |                   |                                         |                                                                                                                                  |                  |                    |                     |                 |                              |

|                   | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                |                                                                                      |                   |                                         |                                                                                                                                                |                  |                    |                     |                              |

| Comments: This object was generated by the targetselector and retrieved from the SIMBAD database.<br><br>SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM.<br>Category=Star<br>Description=[K stars] |                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                     |                                                                                                                                     |                          |                                         |                  |                  |                    |                     |                 |   |      |                    |                          |               |      |                  |                                                                                     |                                                                                                                                     |  |

| SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                                                                                                                                                                                                                                                 |              |                                                                                      |                    |                                         |                                                                                                                                       |                  |                    |                     |                              |

|                   | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM.<br>Category=Star<br>Description=[K stars] |                  |                                                                                   |                    |                                         |                                                                                                                                    |                  |                    |                     |                              |

| SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                                                                                                                                                                                                                                                             |                  |                                                                                   |                    |                                         |                                                                                                                                     |                  |                    |                     |                 |                              |

|                   | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM.<br>Category=Star<br>Description=[F stars] |                  |                                                                                     |                    |                                         |                                                                                                                                    |                  |                    |                     |                 |

| SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                                                                                                                                                                                                                                                             |                  |                                                                                      |                    |                                         |                                                                                                                                   |                  |                    |                     |                 |                              |

|                   | Comments: This object was generated by the targetselector and retrieved from the SIMBAD database.<br><br>SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM.<br>Category=Star<br>Description=[K stars] |                                                                                     |                                                                                                                                     |                          |                 |                  |                  |                    |                     |                 |        |                |                                         |                          |                 |                  |                  |                                                                                     |                                                                                                                                     |                 |   |       |       |                    |       |    |   |   |          |           |

|                                    | SIMBAD listed proper motion for this target. When retrieving targets with PM from SIMBAD, APT requests the coordinates be calculated with an epoch of the year 2000. Do not modify this epoch. Always review coordinates using the Target Confirmation tool, which graphically displays the PM. |                         |                                  |                 |            |                                               |                    |               |                     |                              |  |
