ABSTRACT

The Pillars of Creation in M16 are the most spectacular example of a phenomenon that is often seen in molecular clouds situated near massive OB stars. The radiative and hydrodynamic forces of stellar feedback sculpt the molecular cloud into pillars and globules, and create photodissociation regions (PDRs) at the HII region interfaces. At the tip of pillar heads, many cometary-shaped evaporating gas globules (EGGs) are found, some of which contain young stellar objects. The detailed heating, cooling, and outflow dynamics near the PDRs control the evolution of the EGGs and pillars. We will use JWST NIRSpec and MIRI IFUs to assess the physical conditions in ten M16 EGGs, both with and without embedded young stellar objects, via key diagnostic spectral line emission that arises in the ionized HII region and in the atomic and molecular PDR layers. Lines from molecular hydrogen, [Fe II], OI, and H recombination between 1 and 28 microns measure the temperatures, densities, column densities, extinction, and local far-ultraviolet radiation field in these regions. From these we can determine the masses, mass-loss rate, evaporation timescale, and ultimate fate of the EGGs and inform our understanding of how radiative feedback from massive stars affects molecular clouds and the formation of stars and their protoplanetary disks.

OBSERVING DESCRIPTION

The NIRSpec and MIRI-MRS IFUs will be used from 0.97-27.9 microns to observe the spectrum of 10 evaporating gas globules (EGGs) located in M16.

The NIRSpec IFU is used with the G140M/F100LP, F235M/F170LP, and G395M/F290LP disperser-filter combinations from 0.97-5.27 microns using spectral resolution $R \sim 1,000$. We will make the following mosaics and single pointings to cover the 10 EGGs:

- 1x3 mosaic for EGG7, EGG8, and EGG9 (obs nr. 1)
- 1 single pointing for EGG13 and EGG14 (obs nr. 5)

JWST Proposal 9851 (Created: Friday, March 13, 2026, 1:00:47PM Eastern Standard Time) - Overview

- 1 single pointing for EGG 10 (obs nr. 8)

- 2x3 mosaic of which 3 tiles are removed (and thus 3 tiles are requested) for EGG17, EGG18, EGG19, and EGG21 (obs nr. 12)

Observations nr. 1 and 5 are combined with a dedicated background observation (obs nr. 2). Observations nr. 8 and 12 are combined with a dedicated background observation (obs nr. 9).

We use the 'NRSIRS2RAPID' readout pattern. Since our source is extended, we will perform a “4 point” dithering along with a dedicated background pointing with exposure configurations similar to the science mosaic. Furthermore, we include LeakCal observations to account for the MSA Leakage.

For the MIRI-MRS the entire wavelength coverage is observed (SHORT/MEDIUM/LONG). We will make the following mosaics and single pointings to cover the 10 EGGs:

- 1x3 mosaic to cover EGG7, EGG8, EGG9 (obs nr. 3)

- a single pointing to cover EGG13 and EGG14 (obs nr. 6)

- a single point to cover EGG10 (obs nr. 10)

- 2x1 mosaic to cover EGG17, EGG18, and EGG19 (obs nr. 13)

- a single pointing to cover EGG21 (obs nr. 14)

Observation nr. 3 is combined with a dedicated background observation (obs nr. 4). Observation nr. 6 is combined with a dedicated background observation (obs nr. 7). Observations nr. 10, 13, and 14 are combined with a dedicated background observation (obs nr. 11).

We use the 'FASTR1' readout pattern. Since our source is extended, we will perform a “4 point” dithering optimized for extended sources along with

JWST Proposal 9851 (Created: Friday, March 13, 2026, 1:00:47PM Eastern Standard Time) - Overview

a dedicated background pointing with exposure configurations similar to the science mosaic. MIRI/MRS simultaneous images are taken to improve the astrometric solution of individual MRS exposures.

To optimize the overlap between NIRSpec and MIRI field-of-views and avoid the meteoroid avoidance zone, we require a specific orientation of the NIRSpec and MIRI observations. Therefore, we put a constraint on the aperture position angles.

Proposal 9851 - Targets - Assessing Stellar Feedback on the Evolution of Evaporating Gas Globules in the Pillars of Creation

Proposal 9851 - Observation 14 - Assessing Stellar Feedback on the Evolution of Evaporating Gas Globules in the Pillars of Creation

Special Requirements	Aperture PA Range 102.0 to 106.0 Degrees (V3 102.0 to 106.0) Group Observations 10, 11, 13, 14, Non-interruptible
